Daaman Shah

Binghamton, NY | (201) 780-9230 | dshah13@binghamton.edu | LinkedIn | Github

CS grad student at Binghamton (AI Track, GPA 3.97) with hands-on experience building full-stack platforms and AI systems that actually ship. I've worked across the stack from PostgreSQL architecture, REST APIs to React frontends and deep learning models.

EDUCATION

Binghamton University, State University of New York, Thomas J. Watson College of Engineering and Applied Science
Master of Science in Computer Science - Artificial Intelligence Track, **Cumulative GPA:** 3.97/4.00 *Expected Dec 2026*
Relevant Coursework: Design and Analysis of Algorithms, Systems Programming, Deep Learning, Computer Vision
Publication: IJCSMC, Integrating Faster Whisper With Speaker Recognition

TECHNICAL SKILLS

Programming Languages: Python, Java, C, SQL, JavaScript, TypeScript, HTML, CSS
Frameworks and Tools: React, Next.js, AngularJS, .NET, Flutter, Flask, Docker, Linux, Jupyter, VS Code
AI/ML and Data Science: TensorFlow, PyTorch, Scikit-Learn, OpenCV, SpaCy, NLTK, Hugging Face, Pandas, NumPy, SciPy
Database and Cloud: MySQL, MongoDB, PostgreSQL, Firebase, AWS S3, SAP, Tableau, Power BI, Seaborn, Matplotlib
Software and OS: Git, GitHub, Agile, SCRUM, Jira, qTest, Kanban

PROFESSIONAL EXPERIENCE

Binghamton University - WCAC, *Software Developer Intern* | Vestal, NY *December 2025 – Present*

- Designed and implemented end-to-end full-stack workflows for a micro-internship platform (admin, sponsor, student) using Next.js, TypeScript, and PostgreSQL, reducing manual coordination effort and improving platform usability
- Architected and developed scalable RESTful APIs and backend systems for project lifecycle management (creation, approval, hiring), handling concurrent applicant workflows across multiple active roles simultaneously
- Led development of a bulk email automation system with recipient segmentation and batching, reducing manual outreach effort by 70% and enabling admins to communicate with 300+ applicants instantly
- Established structured PostgreSQL migration workflows and schema consistency rules, eliminating runtime failures, refactored 80% of frontend into modular reusable components, improving responsiveness and resolving UI bugs

Konze Pvt Ltd, *Software Developer Intern* | Ahmedabad, India *June 2024 – December 2024*

- Engineered and deployed core features for a cloud-based CRM (KonDesk) using React and Node.js/Express with REST APIs, improving system performance and enhancing user experience for managing student and client data
- Automated client communication workflows by integrating third-party email and SMS services, reducing manual follow-ups by 30% and streamlining operations for consultants
- Contributed to end-to-end software development in an Agile environment, implementing scalable UI components with Redux, resolving bugs, and collaborating through Jira-managed sprints to deliver production-ready features

PROJECT EXPERIENCE

Real Time Transcription with Speaker Recognition

- Built and optimized a hybrid system for real-time transcription and speaker recognition, combining Faster Whisper (distil-large-v2) for ASR with a custom TensorFlow/Keras ResNet CNN for speaker identification, incorporating PyAudio for live audio capture and multithreading for concurrent processing (Real-Time Factor ~0.62)
- Achieved robust speaker recognition with an average F1-score of 0.945 and 91.7% accuracy across 7 distinct speakers, employing MFCC feature extraction and strategic noise augmentation for improved performance

SportsNet – Full Stack Web Application

- Designed and developed a scalable full-stack platform using React, Node.js, TypeScript, and MongoDB, implementing modular RESTful APIs, JWT-based authentication, and role-based access control to support secure and concurrent user interactions
- Architected backend data models and optimized API workflows for content sharing and user engagement, incorporating efficient query handling, state management, and responsive UI design to ensure low-latency performance across dynamic user operations

JP Morgan Job Simulation on Forage, *Software Engineering* *November 2025*

- Built a Spring Boot microservice with Apache Kafka for high-throughput transaction processing, implementing event-driven ingestion, validation, and persistence using Spring Data JPA and relational SQL models
- Designed RESTful APIs and integrated external services into transactional workflows, ensuring reliable data processing through Maven-based testing and debugging across message pipelines, database operations, and API interactions

LEADERSHIP EXPERIENCE

SAP Code Unnati Innovation Marathon, *Tech Team Lead* | Ahmedabad, GJ *January 2024 – May 2024*

- Led a team of 3 developers to the national finals (top 25 out of 613 teams) by driving end-to-end development of an AI-powered project, coordinating design, coding standards, and timely delivery under competition deadlines

Rushiraj Foundation (RKKF), *Head Coach and Assistant Manager | Ahmedabad, GJ* *January 2021 – December 2024*

- Mentored 1,000+ students and supervised 25 instructors ensuring high-quality teaching in Martial Arts while leading large-scale events, ambassador programs, and marketing initiatives, boosting community engagement by 35%
